Hardware Abstraction Layer Definition

The HAL (Hardware abstraction layer) is the layer that communicates between the Business logic layer and the hardware on the embedded system. The functions and commands are defined in the table below.

| Function | from Business logic | To hardware |
|----------------|------------------------------|---------------------------------|
| Open CD drive | Result OpenDrive(int drive) | Enable pin (drive) for 1 second |
| Close CD drive | Result CloseDrive(int drive) | Enable pin (drive) for 1 second |
| Enable vacuum | Result EnableVacuum() | Enable pin (pump) |
| Disable vacuum | Result DisableVacuum() | Enable pin (valve) |
| Move servo | Result MoveArm(Coord Coord) | Moves the servos. |
